Campus Innovation Fund DAO Repository Map

Folder purposes, key files, and screenshot appendix

You can find our full hub of code at https://github.com/JonasWooh/DAO-Treasury-Governance.git

How to use this guide. This document is meant to help a reader understand the repository quickly. It focuses on the hand-authored source, scripts, manifests, frontend, and deliverables. Large generated or third-party folders such as *artifacts* and *lib* are summarized at the folder level because they contain compiled outputs or dependencies rather than original project logic.

We also Attached a Video demonstrating how the program runs on the environment of our setup.

1. Configuration and repository hygiene

File / Folder	Purpose
config/	Environment and protocol configuration used for live deployment and external integrations.
.githooks/	Local git hooks, mainly for safety checks such as secret scanning.
.github/	GitHub-side automation and repository checks.
.tooling/	Local helper files used by the development environment.
docs/	Short documentation files for repository layout, push safety, and collaborator guidance.

2. Smart-contract source (src/)

File / Folder	Purpose
src/governance/	Governance contracts: CIF token, reputation registry, hybrid vote adapter, governor, and governance constants.
src/funding/	Workflow contract for project submission, milestone claims, approval state, and reputation-linked events.
src/treasury/	Treasury contracts and constants governing project budgets, payout flow, reserve limits, and treasury state.
src/oracle/	Oracle wrapper that reads and validates Chainlink ETH/USD price data.
src/adapters/	External-protocol adapter contracts, mainly the Aave WETH adapter.
src/interfaces/	Interface definitions used to keep modules loosely coupled.
src/mocks/	Mock contracts used only for tests.

3. Tests (test/)

File / Folder	Purpose
test/unit/	Unit tests for isolated modules such as the token, reputation, oracle, Aave adapter, and treasury rules.
test/integration/	Cross-contract tests covering end-to-end governance, funding, treasury, and milestone flows.
test/support.py	Shared helpers and fixtures used by the Python test suite.

4. Automation, deployment, and packaging scripts (scripts/)

File / Folder	Purpose
Deployment scripts	Deploy the governance stack and treasury stack to Sepolia and seed live demo state.
Evidence-export scripts	Turn runtime state and proposal results into screenshots, manifests, and report-ready summaries.
Verification scripts	Assist with contract compilation and Etherscan verification.
Analysis scripts	Generate gas reports, coverage outputs, static-analysis summaries, and the treasury workbook.
Validation scripts	Check the submission package, secret hygiene, and repository consistency.

5. Frontend app (frontend/)

File / Folder	Purpose
frontend/src/pages/	Main user-facing pages: overview, proposals, project detail, submit proposal, milestone claim, treasury, and evidence.
frontend/src/components/	Reusable UI components such as layout shell, metric cards, wallet panel, and loading states.
frontend/src/lib/	Frontend logic for governance state, formatting, runtime validation, evidence rendering, and contract results.
frontend/src/generated/	Generated frontend config and contract ABIs for the live deployment.
frontend/public/runtime/	Runtime JSON bundle used by the frontend to display the deployed scenario and evidence.
Configuration files	Package, Vite, Vitest, and TypeScript settings for the frontend build.

6. Deployment manifests and evidence

File / Folder	Purpose
deployments/	Authoritative JSON and markdown outputs for deployed addresses, proposal scenarios, funding state, and evidence state.
evidence/screenshots/	Captured images proving live governance actions, treasury state, Etherscan verification, and payout results.

7. Analysis, workbook, and final deliverables

File / Folder	Purpose
analysis/coverage/	Coverage summaries and detailed coverage outputs.
analysis/gas/	Gas-usage reports and optimization notes.
analysis/static/	Static-analysis summaries and detailed Slither exports.
excel/	Treasury workbook and its machine-readable summary.
reports/	Final PDF report deliverable.

8. Large generated / dependency folders

File / Folder	Purpose
artifacts/	Compiled Solidity outputs such as metadata, ABIs, and bytecode.
lib/	Third-party dependency code, mainly OpenZeppelin contracts.

9. Screenshot and Etherscan Link appendix

Purpose. The screenshots below are the repository's captured visual evidence for the live Sepolia scenario, frontend state, treasury state, and verification context. The Etherscan Links are below
